Clover Genetics, LLC
National Telehealth Services

About Us
Clover Genetics is a genetic counseling practice that utilizes telehealth to improve access to holistic healthcare. Pittsburgh, PA is our home, but we currently provide services across the US and its territories.

We partner directly with patients, providers, and healthcare systems to provide genetic counseling, facilitate genetic testing, coordinate wellness care, offer support, and other personalized genomic solutions.

National Telehealth Genetic Counseling Services across the United States and its Territories

GENETIC COUNSELING IS FUNDAMENTAL TO HEALTHCARE

"Many communities lack reliable access to genetic counselors, with fewer than one genetic counselor per 100,000 patients. For individuals far from genetics clinics or major medical centers, accessing these resources is a challenge. Without access, many patients are left with unanswered questions like: What will this mean for my treatment? What about my kids or grandkids? How will I afford the testing?"

Telehealth genetic counseling can provide support for communities that would not otherwise have access.

Genetic testing recommendations change at a rapid pace. This increases the risk of incorrect ordering, misinterpretation of results, or patients not being offered genetic testing. By involving genetics specialists for suspected genetic conditions, providers are engaging in improving outcomes, the health of their patients, and their available options for care."

- **Andrew McCarty, MS, LCGC**
Founder of Clover Genetics

WHY GENETIC COUNSELING?

As advancements in research continue to grow and evolve, genetics specialists will continue to play a key part in providing patients with complete and comprehensive medical care.

Genetic counseling is consistently recommended by medical societies including:
NCCN, ACMG, ACOG, SMFM, CDC, USPSTF, NIH, and others

INFORMED DECISIONS

Translating genetic information into comprehensible terms for both patients and providers is a critical role of a genetic counselor. When patients understand relevant genetic information, they can make informed decisions about their medical care.

WHY CLOVER GENETICS

Partnership with Clover Genetics Means Comprehensive Care

We initiate our partnerships prior to patient assessment and remain available throughout the process even after the conclusion of counseling on test results.

- Rapid scheduling and response time
- Convenient telehealth option
- Expertise across genetics specialties
- Correct test selection (the first time!)
- Faster results and diagnosis
- More patient resources
- Education on treatment options
- Connections to research studies
